536 726 with the pairs one behind the other, walked peacefully from house to house. They hummed a song. The first two pairs carried a blanket on their back, and the last pair carried a straw mat. A masked man followed, bent forward, dancing and shooting arrows at the mat. After a while the pairs lined up one beside the other and stayed put, humming their song, while the masked figure emitted the Kayapó tribal cry and danced in menacing fashion, stepping always on the same spot. A little later, the walk was resumed. This scene was repeated several times. Suddenly, however, when the pairs were standing still once more in front of a hut, two masked "Kayapó" rushed headlong from behind it, and four others emerged from behind the neighboring house. All [177] these "Kayapó" had bows or clubs in their hands and were completely disguised with hammocks, blankets, and other belongings of the White guests. Their faces were covered with sifters, and my straw hat had also found a use. While the three Tapirapé pairs kept walking as peacefully as before, the masked figures alternately ran furiously hither and yon, giving their typical cry, and performed a circular dance. In this dance, some of them faced the back of the man in front while others were turned [535] toward the man behind. They all jumped on one leg and then the other, tossing their arms and legs about and gesticulating with their weapons (Photo. 73). After repeating all this several times for half an hour, the "Kayapó" attacked one another and quarreled among themselves. Then the Tapirapé pairs quietly broke up and vanished.

This performance, therefore, contrasts the mildness which 141 is indeed the tribal behavior pattern of the Tapirapé with the nervous aggressiveness of the Kayapó. This seems to be a symbol of universal significance, when we look at the pacifists and militarists in other parts of the world.

609 773 The opinion of the Tupí tribe about the nature of these neighbors[1] seems to be expressed even in their mythology. While the Karajá are regarded as descendants of a water serpent, the ancestor of the Kayapó is tantevoga, the tick. One of the proofs of kinship with those bugs, my informants say, is the falsetto tribal cry that they attribute to their northern foe. This proof, although it might not satisfy a biologist, is sufficient for the ethnologist. Actually, everyone knows that the tick is a pesky nuisance.

[1] [i.e., the Kayapó.--Analyst]

[Ed., pp. 87-88 are not translated.]

000 [89] In Mühlmann (p. 344) we read: "In Polynesia, the new year was reckoned from the beginning of the fishing season, and since this period of time coincided with the appearance of the Pleiades above the horizon, a fruitful half-year, mata-li'i-i-nia, that is, 'Pleiades above,' was distinguished from an unfruitful or less fruitful half-year, mata-li'i-i-raro, that is, 'Pleiades below.' A Pleiadic year was also known in India."

2 It is also worth mentioning Métraux's observation (p. 51) that the Pleiades seem to have been the object of special beliefs among the Tupinambá, who were convinced, according to an unpublished manuscript by Thevet, that they fostered the growth of manioc, the staple of their diet. One of the most beautiful legends of the Taulipáng, a Karaíb [Carib] tribe of the Roroima, relates how the Pleiades came to the sky and also mentions their function as heralds of the rainy season that brings an abundance of food with the appearance of shoals of fish moving upstream to spawn (Koch-Grünberg, p. 13).

805 Among the Tapirapé, I did not find anything corresponding to this Indian and Polynesian culture trait [Tr., the Tapirapé do lend importance to the Pleiades]. It is true that of all the events in the yearly cycle, the rainy season is of greatest interest to these Indians. They did not tell me anything about the Pleiades, however. The rainy season is to them the opposite of what it is to the Taulipáng, namely, not the time of well-being, but, in the words of the Tapirapé, the time of evil shadows, of baleful spirits. It is characteristic of the timid nature of these Tupí Indians that they lend greatest importance to the time of greatest distress, instead of centering their thoughts on the dry season, which is to them the pleasant time of abundant vegetable and animal foods and thus the time of health and pleasure in being alive. [Ed., the last two paragraphs on p. 89 and the first paragraph, as well as the first three sentences of the second paragraph, on p. 90 are omitted.]

[181] [221] [132]

[90] The Tapirapé could not tell me the number of days in the lunar month, although they were familiar with the moon cycle and called the new moon txãhĩ apát, "moon sleeps," or txãhĩ akantxím, "moon finished," and the full moon ãuvahó, ho being the augmentative suffix, and ãuva corresponding probably to the ãũ, "lunar," listed by Montoya, and the yacy icáua, "full, fat moon," given by Stradelli. The first quarter, when the visible part is not yet very thick, is called
